## //ROUTE

- **Route to Display the Username Input Form**
  - Route::view('/', 'username');
  - If the user visits the homepage (`/`), they will see a form (in the `username` view) where they can input their username.
- **Route to Handle Form Submission via POST**
  - Route::post('/welcome', function (Request $request) {
      $name = $request->input('username') ?? 'Guest';
      session(['user_name' => $name]);
      return redirect('/welcome');
      });
  - This route will be triggered when the form on the homepage is submitted, handling the user input.
- **Route to Handle GET Requests to `/welcome`**
  - Route::get('/welcome', function () {
    $name = session('user_name') ?? 'Guest';
    return view('welcome', compact('name'));
    });
  - This route is accessed when a user is redirected to `/welcome` after submitting the form. The `welcome` page will display a personalized greeting based on the username.
- **Route to Display the About Page**
  - Route::get('/about', function () {
      return view('about');
      });
  - This route shows the "About" page when accessed.
- **Route to Display the Contact Page**
  - Route::get('/contact', function () {
    return view('contact');
    });
  - This shows the "Contact" page when accessed.
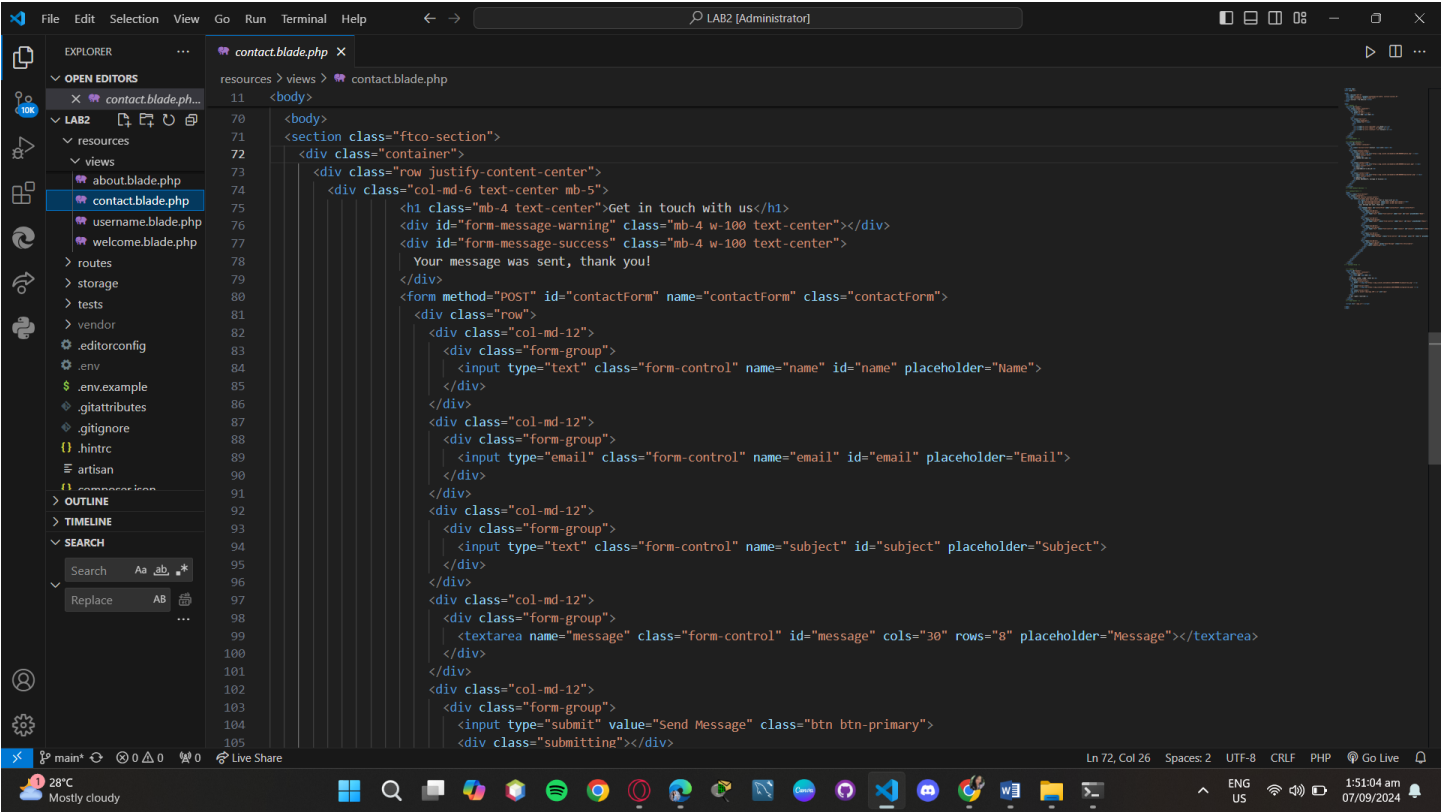

BICOL UNIVERSITY
BSIT 3C

//username

- The form is configured to submit data to the /welcome route using the POST method.
- The backend route (/welcome is set up to handle POST requests and process the incoming form data

//welcome page
